

Mazyar Bahrami

PhD Researcher in Management (Information Systems) | AI Governance & Organizational Control

Rome, Italy | mbahrami@luiss.it | LinkedIn | Google Scholar | GitHub | Research Website

Research Profile

PhD researcher in Management (Information Systems) at Luiss Guido Carli University studying how governance becomes operational across AI and digital systems. My doctoral research develops this agenda across three levels: governance mechanisms embedded in sociotechnical systems, adaptive organizational control under cyber risk, and interorganizational information infrastructures for frontier-AI compute governance. I combine organization and Information Systems theory with design-science, causal, computational, and process-oriented methods. Earlier academic and professional experience spans engineering, finance, data science, blockchain, analytics, and consulting.

Research Interests

Organizational AI governance & frontier AI governance | Governance-by-design & sociotechnical control | Adaptive risk governance & cyber resilience | AI assurance, verification & accountability | Interorganizational information infrastructures & compute governance

Doctoral Research Pipeline

Governance-by-Design of Inter-Organizational Healthcare AI Collaboration: A Design Science Research Study Under review

Bahrami, M., & Spagnoletti, P. Design Science Research on embedding privacy, accountability, traceability, and regulatory requirements into inter-organizational AI collaboration architectures. Submitted to a peer-reviewed journal.

From Compliance to Resilience: Cybersecurity Governance as an Adaptive Control-Loop Capability Research in progress

Theory-driven doctoral study of how organizations sense changing cyber risk, activate governance responses, monitor outcomes, and adapt control capabilities over time; combines organizational theory with causal and computational methods.

Making Frontier AI Governable: How Interorganizational Information Infrastructures Produce Visibility, Verification, and Control Across the AI Compute Ecosystem Early-stage research

Developing an Information Systems process account of how resource, information, and authority architectures make advanced AI compute observable, verifiable, and actionable across organizational and jurisdictional boundaries.

Peer-Reviewed Publication

A Study of Performance of the Hybrid Model in Assessing the Default Risk for Companies Listed on the Tehran Stock Exchange 2021

Nabizade, A., & Bahrami, M. *Journal of Financial Management Strategy*, 9(1), 155–176.

Selected Research Essays

What Changes Faster Than It Can Be Checked: Reading Frontier AI Safety Frameworks as Control Loops Research essay, 2026

Personal research website. Public-facing analytical essay examining frontier AI safety frameworks through organizational control, traceability, authority, assurance, governance latency, and framework revision. *Writing page.*

Education

PhD in Management – Information Systems 2025–2029
Luiss Guido Carli University, Rome, Italy

Research on organizational AI governance, cybersecurity governance, organizational control, governance-by-design, and computational methods.

MSc in Data Science and Management 2022–2024
Luiss Guido Carli University, Rome, Italy

Thesis: *A Decentralized and Privacy-Preserving Framework for AI Model Training in Healthcare: Integrating Federated Learning and Blockchain.*

Master of Business Administration in Finance 2015–2017
Kharazmi University, Tehran, Iran

Thesis: *Analysis of Hybrid Model Performance in Default Risk Assessment of Companies Listed on the Tehran Stock Exchange.*

BSc in Mechanical Engineering 2010–2014
Qom University of Technology, Qom, Iran

Thesis: *Computational Modelling and Simulation of a Shell-and-Tube Heat Exchanger.*

Research and Professional Experience

PhD Researcher in Management – Information Systems <i>Luiss Guido Carli University, Rome, Italy</i> Developing theory-driven research on AI governance, cybersecurity governance, organizational control, and governance-by-design. Current projects combine organization and Information Systems theory with quantitative, causal, computational, and design-oriented research methods.	2025–Present
Blockchain Developer <i>LaborX, Rome, Italy</i> Worked with decentralized and blockchain-based technologies, with practical exposure to traceability, permissions, verification, and technical governance mechanisms.	2024–2025
Sales Data Analyst <i>Golrang Industrial Group / Ofogh Koorosh Chain, Tehran, Iran</i> Analyzed sales and operational patterns across a large retail network and developed decision-support reporting for commercial and operational teams.	2021–2022
Category Sales Developer <i>Snapp Group / Bamilo, Tehran, Iran</i> Supported commercial planning, forecasting, supplier assessment, subcategory performance analysis, and business development in digital commerce.	2018–2019
Business Analyst <i>The European House – Ambrosetti, Tehran, Iran</i> Contributed to market research, strategic analysis, and consulting assignments; structured ambiguous business questions and communicated evidence to decision-makers.	2017–2018
Computational Fluid Dynamics Engineer <i>Iran Polymer and Petrochemical Institute, Tehran, Iran</i> Conducted computational modelling, simulation, engineering analysis, validation, and technical communication.	2014–2017

Research Methods and Technical Skills

Research methods: Quantitative research, Design Science Research, statistical analysis, econometrics, causal inference, computational modelling, simulation, network analysis, and data visualization.

AI and machine learning: Machine learning, natural language processing, feature engineering, model evaluation, causal machine learning, and applied predictive analytics.

Programming: Python, R, STATA, MATLAB, Solidity, and SQL.

Data and visualization: Power BI, Tableau, and Excel.

Honors and Awards

DAMA Italy Award Master’s Thesis in Data Management	2025
Full Tuition Waiver Scholarship Luiss Guido Carli University	2022
Full Tuition Waiver Scholarship MBA Program, National Award	2015
Top 1% Iranian National Master’s Entrance Examination	2015
Full Tuition Waiver Scholarship BSc in Mechanical Engineering, National Award	2010
